

When "Passion for Clean Air" leads to success

Blaschke Umwelttechnik GmbH celebrates its 45th business anniversary in 2021.

Meitingen, July 05, 2021. Blaschke Umwelttechnik GmbH is celebrating its 45th anniversary this year. Hans-J. Blaschke founded the company in 1976 as a commercial agency for extraction systems and workshop equipment. Today, Blaschke Umwelttechnik is one of the leading international manufacturers in the field of exhaust extraction technology. The custom-designed extraction systems protect employees in railway workshops, fire stations and in industrial plants from harmful exhaust gases produced by diesel engines. Over 1,000 systems installed worldwide in a wide variety of industries will make a significant contribution to health protection in the workplace in 2021.

In 1976, the current company owner Hans-J. Blaschke laid the foundation for the company's success story by registering a commercial agency for industrial goods. When the Swedish company Celsius Vent stopped selling its extraction systems in Germany in 1980, the young entrepreneur seized his opportunity. He invested in the development and manufacture of his own product line, initially producing exhaust extraction systems for automotive workshops and the automotive industry.

In the years that followed, the product range was steadily expanded to include extraction systems for fire engines and rail vehicles. In the 1990s, the Meitingen-based company expanded abroad. The extraction technology was also continuously developed. In 1992, Blaschke Umwelttechnik was awarded the Bavarian State Prize for particularly innovative achievements. In the meantime, the focus of the product range is on extraction systems for railway companies, fire departments and construction machinery manufacturers.

In the anniversary year, the decision taken by Hans-J. Blaschke, founder and managing director of Blaschke Umwelttechnik GmbH, in 1976 proves to be right for him: "45 years in the market confirm our technological and economic persuasiveness. Today, *Clean Air - Made by Blaschke* stands for high product quality, practice-oriented solutions and economic efficiency. Our know-how and the experience of our committed employees are the foundation for future successful national and international projects."

About Blaschke Umwelttechnik

Blaschke Umwelttechnik GmbH develops, produces and installs systems for extracting diesel exhaust gases and other air pollutants. Blaschke extraction systems are used worldwide in maintenance depots of railway companies, fire stations, industrial companies and car workshops. Railway customers include well-known companies such as Deutsche Bahn, Austrian ÖBB, French SNCF, Belgian SNCB, Turkish TCDD, and other well-known companies such as Hitachi Rail Europe and Transdev Group.
